“I learned that any science is useless unless the public is able to understand it and benefit from it.”
-Leah Gay

“I feel more prepared to be an advocate for climate science in the world now.”
-Casey Zoellick

“I had no idea there were so many leadership opportunities in the scientific community.”
-Caroline Barlow

“It opened my horizons about all the different fields of activity in atmospheric science.”

Undergraduate Leadership Workshop

University Corporation for Atmospheric Research
PO Box 3000
Boulder, CO 80307

www.spark.ucar.edu/students
The Undergraduate Leadership Workshop takes place over five days in June, during which students visit various national research facilities, converse with renowned scientists, and learn about career opportunities in the atmospheric sciences.

Students will gain:
- A clear understanding of leadership behaviors
- Knowledge of how to choose a graduate school
- A sense of the life of professional researchers
- A network of peers in the atmospheric sciences across the nation

Universities will gain:
- Undergraduates who are more familiar with the wide variety of research topics in the atmospheric sciences
- Passionate undergraduate leaders who will share opportunities with other students
- Motivated students interested in pursuing graduate programs in the Earth system sciences

The ULW seeks to inform undergraduate leaders attending a UCAR member and affiliate universities and majoring in the atmospheric or related sciences of career opportunities, while boosting their motivation and interest in reaching their fullest potential as future professionals and leaders in our field.
