

Sector Analysis Planning Sheet

Solving the Carbon Dioxide Problem Student Sheet

Sector we are analyzing: _____

Parts: Define the components of this sector. How does it contribute to the problem of climate change? In what different areas are solutions needed? Provide information to help us really understand this sector and how to address it. Include data where possible.

Purpose: Explain how addressing different parts of this sector will help reduce atmospheric carbon dioxide. What is their role? Provide 1-2 examples of the type of solutions that are currently being implemented in this sector, and explain how they will help.

Complexities: What are the challenges with implementing solutions to this sector? What further developments are needed to make reducing atmospheric carbon dioxide in this sector successful? What questions do you have?
